

UNCERTAINTY

HIGH

LOW

Scarcity of resources is a driven force with high impact and low uncertainty. Limited resource has the linear relation to the growing population, and it can cause the life concerned problem such as starving. From the other side, each area has the different limited resource, developing a nice trading or sharing system may control the situation. Airbnb, Uber are the example to get use of this driving forces. Coworking space is also a solution to face the scarcity of space. Maybe we can find the rare resource in the Vinkhuizen from both physical aspect or mental aspect.

Technology Development is the other main driving force. Although with its relatively high uncertainty on time, it can cause dramatic change on people's lifestyle. Technology now are not only addressing real material. The most valuable things now is the information collecting from the real world and the ability to improve by itself in the virtual world without resource form real world. Automation and artificial intelligence will be the next big step for human society. The operation of life will be more efficient because lots of work are doin in the virtual world. More efficiency means less use of money, a efficient way to contral the element in the Vinkhuizen may be a interesting things when we only have limited budget.
